"The Little Array that Could"

Why Toby Needed Pure Storage FlashArray

"Our FlashArrays were purchased over a two year period, to replace aging monolithic SAN arrays. They resolved all of our storage bandwidth bottlenecks and capacity issues."

How Toby Uses Pure Storage FlashArray

"We have 5 FlashArrays, shared in a 5 organization multi-tenant environment. Two are for file servers, two are general purpose, and one is for Oracle and SQL databases."

What Toby Likes Most About Pure Storage FlashArray

"We have had excellent performance running Oracle and SQL databases on the FlashArray and the maintenance couldn't be easier. Downtime is virtually non-existent because of the design of the architecture."

What Toby Has Achieved With Pure Storage FlashArray

"The simplicity and performance has transformed our business. I used to spend a considerable amount of time managing legacy storage, but now I have time to run POCs on other products as well as managing the health of my virtual environment."

Toby Wenzel
Systems Architect
State Water Resource Control Board

Toby's Advice

"Pure Storage FlashArrays are excellent for virtual environments. The speed and dedupe/compression is extremely valuable."
