The End-user Experience

Pure Services helps you realize the value of your IT investments. The Pure FlashArray File Services Enablement service enables you to quickly take advantage of FlashArray File Services, thereby accelerating time to value. A key benefit of this offer is that it provides global deduplication and compression for files across a single shared storage pool. Features like snapshots, performance management, and quotas give you the benefits of the same set of data services you already use for block storage.

The FlashArray File Enablement Service provides the following outcomes:

- FlashArray File Services technical workshop
- Enablement of a test FlashArray File Services environment
- Flash Array File Service design and operations guide
