

# CONTROL THE CHAOS

Managing a typical data center is an overwhelming task. You're often forced to use a different interface to manage each separate component. That complexity can leave you struggling to gain mastery over your environment.

FlashStack® infrastructure puts you in control. It delivers simple, integrated administration through Cisco Intersight, empowering you to holistically manage your FlashStack hybrid landscapes, both on premises and in the cloud.

One tool to manage all components in your FlashStack infrastructure, delivering:

## Simplified Administration

The only best-of-breed converged infrastructure architecture with a single management interface.

Automate initial deployment and ongoing operational management.

## Management at Scale

Create and run your own workflows to manage storage and other infrastructure components together.

Use analytics/artificial intelligence (AI) to automate operations.

## Seamless Upgrades and Flexible Consumption

Perform updates as frequently as needed without impacting application availability or business operations.

Choose from a variety of flexible consumption models, including full stack-as-a-service.

Scale capacity for compute, storage, and networking independently.

# CONTROL THE CHAOS, OR IT WILL CONTROL YOU.

Master your entire FlashStack infrastructure through a single integrated view. For more information, visit [www.flashstack.com](http://www.flashstack.com).
