

# Put an end to siloed data

## DXC Data Platform

### Benefits

- Rapidly access data from any location
- Reduce data volume and operating costs
- Integrate data environment
- Avoid migration costs

### Features include:

- Standardized, repeatable data solutions and solution sizing
- Rapid deployment
- Automated and integrated billing
- Automated and integrated service management
- Evergreen life-cycle management
- Long-running backups

Unleash the value of data in a hybrid cloud environment through high-velocity data processing and storage

As organizations add new applications and capabilities to their IT environment, the proliferation of siloed datasets is growing. Early efforts to address this problem led to the creation of data warehouses and data lakes, but this just created another high-maintenance silo of data.

Data management challenges cost organizations an estimated \$2 million annually, and more than one in three IT leaders say siloed data creates inefficiencies and hampers strategic decision making. Ideally, enterprises should be able to treat all sources as a single resilient, high-performance and ubiquitous digital platform.

DXC Data Platform is a digital service offering that enables digital transformation through a data-centric architecture, providing anywhere-anytime access to data with the right-sized performance and data protection. DXC Data Platform is a partner-engineered solution that utilizes solutions from PureStorage and Veritas to provide industry-leading storage and backup services to meet any recovery SLA in a cost-effective manner. It also provides innovative functionality to enable customers to realize the full value of their data throughout its lifecycle, supporting data analytics and more.

### Automated, self-healing, secure

DXC Technology's scalable services, built on a data-centric architecture, provide applications and developers with on-demand, policy-based automation that minimizes and even eliminates the need for human intervention. Self-healing and protective capabilities help ensure business continuity while securing data.

### Hybrid cloud by design

DXC Data Platform enables the coexistence and interworking of on-premises, hosted, as-a-service and public cloud data resources, allowing applications to take advantage of the most appropriate mix of resources to meet specific business needs.

This service is constantly on and constantly improving. Upgrades can be made while continuously operating at the speed demanded by applications, users and machines, reducing concerns over technology obsolescence.

DXC Data Platform offers a hybrid cloud solution for customer environments that have challenges with backups exceeding allotted backup windows and recoveries exceeding their required recovery time objective SLAs. It helps customers reduce the cost and complexity of their enterprise data protection solution.

**Data protection**

DXC Data Platform includes industry-best, right-sized enterprise data protection services that deliver a cost-optimized solution with multiple tiers of recovery capabilities. It not only delivers a data protection solution that meets the strictest SLAs, but it also employs analytics to help customers realize the full value of their data throughout the data protection life cycle.

**Cloud integration**

Clouds are separate and distinct, leading to siloed cloud environments. DXC Data Platform helps organizations take full advantage of innovation across multiple clouds. It also helps break down organizational silos between IT builders and technology operators and increase the agility of DevOps teams.

**Partnership built on innovation**

DXC uses Pure Storage's data solutions, which enable software-as-a-service companies, cloud service providers, and enterprise and public sector organizations to deliver real-time, secure data to power mission-critical production, DevOps and modern analytics environments in a multi-cloud environment.

**Why choose DXC?**

- Cost optimization. Unlike other providers that model increases in

storage costs over time, DXC helps optimize and even reduce storage costs. Our approach informs you about capacity and performance, and we make it easy to see where you might be paying for performance you are not using.

- **Expertise.** DXC manages 750 petabytes of storage for clients and has over 50 years' experience in managing compute and data environments for commercial and public sector organizations across the globe. DXC leverages this expertise and our partner network to build the right solution for any workload.
- **Flexibility.** You can quickly scale storage needs up or down based on business demand through a simple service catalog and a 10 percent capacity buffer.
- **Industry experience.** DXC is one of few providers that can fully understand your industry and the implications to your digital transformation, storage environment and cloud, hybrid and compute models.
- **Security.** DXC provides end-to-end security expertise to protect your data, offering three levels of data protection, from replication to full disaster recovery. We deliver data as a service in the most highly secure environments.

**Industry-leading partnership**

The partnership combines industry-leading primary storage from Pure Storage, Veritas' enterprise-grade data protection and DXC's digital transformation services.

Pure Storage and Veritas are working together to protect enterprise data through Pure Storage's all-flash portfolio, supported by DXC services.

This collaboration extends to enterprise-class data protection for Pure Storage's Data Hub architecture, which unleashes data insights by centralizing data repositories on flash blade to combine streaming analytics, backup, data lakes and artificial intelligence (AI) clusters.

Together, Pure Storage, Veritas and DXC enable clients to quickly adopt and transform next-generation technologies, including AI and machine learning, and maximize the value of their data.
