SOLUTION BRIEF

Pure Storage Advanced Services

Focus on innovation with help from Pure Storage® Advanced Services.

Your IT team delivers, but it's always expected to do more. Pure Storage Advanced Services can help you fill gaps, assess technology, and develop innovation plans. We are experts in storage, multicloud, data protection, and data applications. When you need more, our consultants will partner with your team to deliver innovation and results.

Define and Develop a Modern Data Experience™

A Modern Data Experience from Pure Storage can give any organization a better way to leverage data with storage that's always modern, easy to manage, and provides flexible data consumption. Our Advanced Services team will help you build a practical implementation plan with a checklist of steps, best practices, and a total-cost-of-ownership analysis. Accelerate the benefits of implementing a Modern Data Experience.

Evaluate and Activate

Start your journey to the Modern Data Experience with a solid foundation and actionable plans. Advanced Services workshops, like Assessment and Optimization, dive deep into your IT environments and industry trends to deliver a clear basis for planning your net steps. You can also choose the Operational Readiness or Multicloud Strategy workshops to develop plans for increasing the value of your data to your end customers. Advanced Services offers effective, defined scope services to move your organization forward.

Fill Gaps to Innovate

Your IT team is always expected to innovate—and do it faster than ever before in the face of immense global and technological change. Wherever you are in your IT technology journey, Pure Advanced Services can work with your teams to fill gaps, assess business goals, and develop innovation plans. We can also help you integrate with technologies including Amazon AWS, Microsoft, Oracle, Splunk, VMware, and many others. When you need more than define-scope projects, our consultants will join your project team based on a statement of work to deliver innovation and results in today's complex IT environment.

Develop Knowledge and Expertise

- Workshops dive deep and deliver tangible plans for moving ahead.
- Build expertise with trainings, workshops, and consulting.

Fill Gaps

- Leverage our team's expertise in multicloud, data protection, ransomware, and more.
- Fill gaps in your project team to help your IT organization innovate.

Customize Your Modern Data Experience
