Quantum Backup Storage for Pure
Options for Any Backup Environment

PROTECT YOUR PURE FLASHARRAY IN ANY BACKUP ENVIRONMENT

Pure FlashArray systems accelerate performance of business-critical applications and databases—and protecting those applications is as critical as ever. And it's not just about protecting against data loss and disaster recovery, it's also about protection against cyber threats like ransomware.

Quantum's data protection solutions are designed to protect your data in any backup environment—and with high-performance, high-density secondary storage, our solutions minimize the impact of backup on your production environment and your wallet.

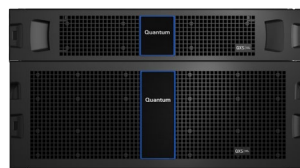

QUANTUM'S DATA PROTECTION PORTFOLIO

DXi® DEDUPLICATION

- Maximize data reduction
- Get leading price-performance
- Minimize power and cooling
- Scale easily

QXS™ BLOCK STORAGE

- High performance
- Highly reliable
- Cost-effective
- Scales easily

SCALAR® TAPE STORAGE

- Most efficient, lowest cost
- Offline data protection
- Proactive diagnostics
- Scales easily

BACKUP SOFTWARE OPTIONS   VERITAS   IBM   veeam   COMMVAULT   **BACKUP SOFTWARE OPTIONS**

QUANTUM BACKUP STORAGE

DXi and Scalar Tape
- High-performance deduplication appliances
- Tape for ransomware protection
- Industry-best storage density
- Capacity-on-demand scalability
- Integrated with all leading backup applications

SureStaQ™ for Commvault
- Validated reference architecture
- Converged solution
- Independently scalable
- Makes Commvault easier to deploy
- Under $200 per terabyte at scale

WHY QUANTUM AND PURE STORAGE

- Quantum is a **specialist in secondary storage** for data protection and archive

- **Backup application agnosti**c—provides unique integration with all leading backup applications, including Veeam Data Mover, NetBackup OpenStorage Technology (OST), and many more

- **High-performance deduplication appliances** minimize backup window to maximize availability of production applications running on Pure FlashArray

- **Variable-length deduplication** maximizes data reduction to minimize backup disk storage spend

- Scalable LTO tape storage provides low-cost, offline protection—**the most effective way to protect against ransomware**

- Both DXi® and Scalar® tape provide **industry-leading density** to reduce data center footprint, and power and cooling costs

- Both DXi and Scalar tape scale easily with unique **capacity-on-demand scalability**

- SureStaQ™ for Commvault is a **validated reference architecture** that makes Commvault easier to deploy with independently scalable building blocks—providing unmatched ROI at under $200 per terabyte at scale
