

Achieving Hyper-Available Federal Data

In today's world, data is very much a strategic asset for federal departments and agencies. To succeed and modernize, governments need data-centric strategies.

As a consequence, federal IT departments now struggle with:

- Downtime
- Data management
- Regulatory compliance
- Recovery time and recovery point objectives (RTPO™)

Cisco, Pure Storage and Veeam deliver a powerful converged infrastructure solution that guarantees not just the availability, but the hyper-availability of data, and helps you achieve unparalleled data protection for your federal department or agency.

The Hyper-Available FlashStack: Delivering always-on, always available federal data

Hyper Availability

Eliminate data loss and provide unparalleled rapid recovery

Simplicity

Streamlined buying and support experience, faster deployment

Operational Savings

Simplified management means reduced overhead and support

Reliability

Built-in data protection means greater availability and reliability of apps and data

Agility

Scale out functionality in minutes to support new or changing IT services and apps

Real-life Federal Outcomes

Improve scientific research through hyper-availability

Federal government has immediate and constant access to research data, helping minimize downtime and increase operational efficiency

Protect criminal forensics with advanced monitoring, reporting, and capacity planning

With visibility of the entire environment, the IT team can allocate resources efficiently and resolve issues before they become real problems

Modern government agencies depend on data that's consistently reliable and accessible

High performing Cisco FlashStack with Pure Storage FlashArray

Flexible, integrated infrastructure that simplifies compute, storage, systems management, and networking

Validated solution architectures for tier one apps that run your federal organization

Designed for performance and scalability for a wide range of environments and applications including sensitive departmental data

Data protection and hyper-availability with Veeam Availability Suite

Delivers availability for ALL workloads—virtual, physical, and cloud—from a single management console

Instantly recover VMs, complete objects, sensitive records, and more

Combines backup, restore and replication with advanced monitoring, reporting and capacity planning with fast and secure ways to backup, replicate and restore to the cloud
