

# Achieving Hyper-Available Healthcare Data

Today's medical world generates huge amounts of data and legacy IT infrastructures can't handle the strain.

## As a consequence, healthcare IT departments now struggle with:

-  Downtime
-  Data management
-  Compliance around data protection
-  Disaster recovery for electronic health records (EHR)

Cisco, Pure Storage and Veeam deliver a powerful converged infrastructure solution that guarantees not just the availability, but the hyper-availability of data, and helps you achieve unparalleled data protection for your healthcare organization.

## The Hyper-Available FlashStack: Delivering always-on, always available healthcare data

### Hyper Availability

Eliminate data loss and provide unparalleled rapid recovery

### Simplicity

Streamlined buying and support experience, faster deployment

### Operational Savings

Simplified management means reduced overhead and support

### Reliability

Built-in data protection means greater availability and reliability of healthcare apps and data

### Agility

Scale out functionality in minutes to support new or changing IT services and apps

## Real-life Healthcare Outcomes

### Improve patient care through hyper-availability

Healthcare providers have 24x7 access to patient health records, helping them provide the best care possible and increase operational efficiency.

### Protect important medical data cost-effectively

Simplified backup of critical data while reducing overall software costs by 70% over legacy storage and backup solution.

## Modern healthcare depends on data that's consistently reliable and accessible

### High performing Cisco FlashStack with Pure Storage FlashArray

Flexible, integrated infrastructure that simplifies compute, storage, systems management, and networking

Validated solution architectures for tier one apps that run your SLED organization

Designed for performance and scalability for a wide range of environments and applications including sensitive departmental data

### Data protection and hyper-availability with Veeam Availability Suite

Delivers availability for ALL workloads—virtual, physical, and cloud—from a single management console

Instantly recover VMs, complete objects, body camera footage, public safety data, and more

Combines backup, restore and replication with advanced monitoring, reporting and capacity planning with fast and secure ways to backup, replicate and restore to the cloud
