

Achieving Hyper-Available SLED Data

In today's world, data is very much a strategic asset for SLED organizations. To succeed and modernize, governments need data-centric strategies.

As a consequence, SLED IT departments now struggle with:

- Downtime
- Data management
- Regulatory compliance
- Disaster recovery for city and state infrastructure

Cisco, Pure Storage and Veeam deliver a powerful converged infrastructure solution that guarantees not just the availability, but the hyper-availability of data, and helps you achieve unparalleled data protection for your organization.

The Hyper-Available FlashStack: Delivering always-on, always available SLED data

Hyper Availability

Eliminate data loss and provide unparalleled rapid recovery

Simplicity

Streamlined buying and support experience, faster deployment

Operational Savings

Simplified management means reduced overhead and support

Reliability

Built-in data protection means greater availability and reliability of apps and data

Agility

Scale out functionality in minutes to support new or changing IT services and apps

Real-life SLED Outcomes

Improve public safety through hyper-availability

State and local governments have 24.7.365 access to public safety data, helping them provide the quickest response possible and increase operational efficiency.

Protect important IT infrastructure cost-effectively

Simplified backup of critical data while reducing overall software costs by 70% over legacy storage and backup solution.

Modern government agencies depend on data that's consistently reliable and accessible

High performing Cisco FlashStack with Pure Storage FlashArray

Flexible, integrated infrastructure that simplifies compute, storage, systems management, and networking

Validated solution architectures for tier one apps that run your SLED organization

Designed for performance and scalability for a wide range of environments and applications including sensitive departmental data

Data protection and hyper-availability with Veeam Availability Suite

Delivers availability for ALL workloads—virtual, physical, and cloud—from a single management console

Instantly recover VMs, complete objects, body camera footage, public safety data, and more

Combines backup, restore and replication with advanced monitoring, reporting and capacity planning with fast and secure ways to backup, replicate and restore to the cloud
